BorActin™

insecticide powder

99%

Boric Acid Dust

BorActin Insecticide Powder

is a new insecticide dust for use against a wide range of crawling insects in both existing and new construction applications. The moisture resistant dust is air-milled with silica for excellent 'dustability' without clumping. BorActin is long-lasting, economical,

odorless, and non-repellent. The dust is not affected by heat and will remain active indefinitely. It is ideal for application in voids and other inaccessible areas. BorActin is labeled for use in federally-inspected food plants, in both food and non-food areas and contains a blue warning dye. It may also be used in poultry houses for darkling

beetle control, as well as in sewers. BorActin may be used in new construction pre-treat applications for prevention of cockroach and drywood termite infestations. Versatile, long-lasting and economical, BorActin is a perfect addition to your pest management arsenal for void treatments in residential and commercial accounts.
