

2(ee) Recommendation

Use information in accordance with Section 2(ee) of FIFRA

DUPONT™ PASTORA® HERBICIDE

EPA Reg. No. 352-819

FOR SUPPRESSION OF KR BLUESTEM IN THE STATE OF TEXAS

This recommendation is made as permitted under FIFRA Section 2(ee) and has not been submitted to or approved by EPA.

DIRECTIONS FOR USE

It is a violation of federal law to use these products in a manner inconsistent with their labeling. Always read this FIFRA 2(ee) bulletin and the entire label on the product container before using this product.

DuPont will not be responsible for losses or damages resulting from the use of these products in any manner not specifically instructed by DuPont. User assumes all risks associated with non-labeled use.

DuPont™ PASTORA® herbicide at 1.0 to 1.5 ounces per acre may be used for suppression‡ of KR bluestem. Applications made to weeds that are under environmental stress (such as drought) may result in unsatisfactory results.

A repeat application 4 to 8 weeks after the first application is the best approach for an improved level of suppression. Do not apply more than 2.5 ounces of PASTORA® per acre per year.

The addition of a nonionic surfactant (NIS) at 0.25% to 0.5% v/v (1 to 2 quarts per 100 gallons of spray) or crop oil concentrate (COC) at 1% v/v (1 gallon per 100 gallons of spray) to Pastora is required.

See PASTORA® label for additional application information.

‡ Weed suppression is a reduction in weed competition (reduced population and/or vigor) as visually compared to an untreated area. The degree of suppression varies with the size of the weeds and the environmental conditions during and after treatment.
