

Hi-Yield[®]

31140 Nutsedge Control

Use in landscaped areas or lawns

Absorbed into the leaf within 24 to 48 hours

Yellowing or Browning of the leaves usually occurs
with 10-14 days

UPC Number 7-32221-31140-4
0.03oz case of 12 250 cases per pallet

Controls Nutsedge after emergence in established cool and warm season turfgrass including: Bahia, Bermuda, Centipede, Creeping Bentgrass, Kentucky Bluegrass, St. Augustine, Tall and Fine Fescue, Perennial Ryegrass and Zoysia.

Application Rates:

Easy to apply by taking the water soluble bag containing the water dispersible granules and dissolving completely into 1 gallon of water in a spray container. Add 2 teaspoons of nonionic surfactant (we recommend Hi-Yield Spreader Sticker) to the mixture and stir well.

The surfactant helps penetrate the waxy layer of the Nutsedge leaf thereby facilitating absorption into the weed.

Use mixture the same day it is blended--do not store diluted mixture as it will degrade. Pets and people can return to area when completely dry. Product is rainfast within 4 hours of spraying. For best results, do not mow for 2 days before or after treatment.

Always Read and Follow Label Directions
