

Spending a little too much time  
with your green customers?

**YOU NEED THE SOLUTION THAT SETS  
A NEW STANDARD IN RESIDUAL CONTROL.**

Introducing new Harmonix botanical insecticide from Bayer.

**Harmonix**<sup>™</sup>  
INSECT SPRAY

# Finally, a botanical product that delivers superior results.

Harmonix Insect Spray is the non-synthetic solution both you and your green customers have been waiting for.

## HIGH-IMPACT PERFORMANCE FROM A LOW-IMPACT PRODUCT.

Harmonix Insect Spray is setting a new standard for the entire category. Compared to other botanical insecticides, new Harmonix Insect Spray is so much more effective, with residual control that lasts 28 days or longer. It delivers a quick knockdown on over 60 pest species.

## PERFORMANCE THAT GIVES YOU TIME TO GROW YOUR BUSINESS.

In the past, botanical products just didn't work very well – costing you time and money. With new Harmonix Insect Spray, frequent service calls to disappointed customers will become a thing of the past. Harmonix Insect Spray delivers better immediate results and long-lasting control, giving you more time to grow your business. And you're going to need it, especially when your green customers start telling their friends they finally found an alternative service that works.

## BOTANICAL INNOVATION – BACKED BY BAYER.

Harmonix Insect Spray is made with pyrethrum, a botanical insecticide derived from the chrysanthemum flower. It's an innovative, sustainable solution that fills a gap in your portfolio – superior, low-impact pest services. Plus, it's backed by Bayer, the company people have trusted for 150 years. Harmonix Insect Spray is Bayer's first botanical product without a synergist available to PMPs, and it was definitely worth the wait.

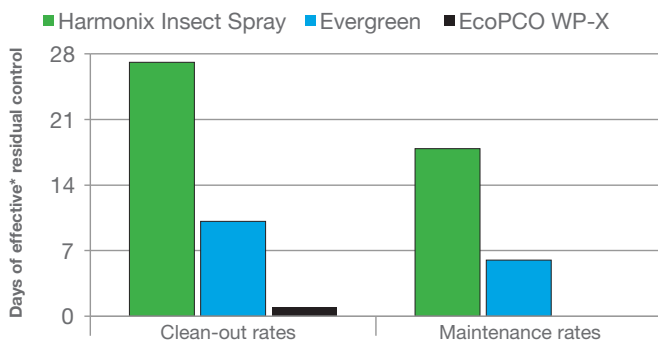

## PERFECT FOR SENSITIVE ACCOUNTS.

Harmonix Insect Spray is your best choice for residual control in sensitive accounts, calling for a botanical insecticide without synergists, such as:

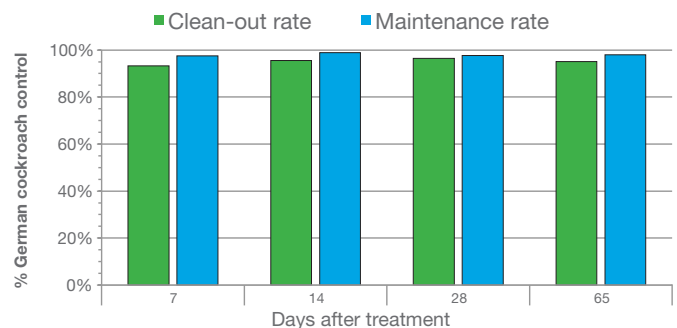

- School IPM programs
- L.E.E.D. facilities
- Health care facilities

### Outperforms the Competition

METHOD: Effective control defined as >95% mortality after 24 exposure to treated, non-porous surface aged in indoor environments. Data presented are an average across multiple pest species: German cockroach, house crickets, carpenter ants, Argentine ants, odorous house ants, houseflies & Aedes mosquitoes. [Source: OE09NARBYT, OE10NARB72]

### Provides Long-Lasting Residual

METHOD: German cockroach control trial in multi-family housing. Pre-treatment populations averaged ca. 90 cockroaches per apartment, and each apartment was treated with ca. 1.0 liter of spray dilution. [Source: OE012NARBYX-EJP1]
