

Corrects Iron Deficiency

SEQUESTAR® IRON 6%

GUARANTEED ANALYSIS

3-0-0

Total Nitrogen (N)	3.0%
3.0% Other water soluble nitrogen	
Iron (Fe)	6.0%
6.0% Chelated Iron	

Derived from ferric ethylenediamine
di-(o-hydroxyphenylacetate) (FeEDDHA)

KEEP OUT OF REACH OF CHILDREN

CAUTION: HARMFUL IF SWALLOWED

NET WT: 4 OZ / 113.4 g

Fully
Chelated Iron

Ideal for Alkaline Soils

SEQUESTAR® IRON 6% chelate is a water-soluble iron that is readily available to plants. It can be soil applied to prevent or correct iron deficiency (chlorosis).

SEQUESTAR® IRON 6% is formulated with EDDHA chelate to extend iron availability to plants, especially those grown in calcareous, alkaline or acid soils. It may be dissolved in water and applied as a soil drench. For best results, SEQUESTAR® IRON 6% should be surface applied and moved into the root zone by drenching, irrigation or rainfall.

SEQUESTAR® is a registered trademark of Monterey AgResources.

DIRECTIONS FOR USE — GENERAL

Apply SEQUESTAR® IRON 6% annually in the spring and when iron chlorosis symptoms appear.

For trees and shrubs, uniformly drench or spray SEQUESTAR® IRON 6% within the dripline beneath the plant and irrigate into the soil.

DIRECTIONS FOR USE — SPECIFIC

TREE CROPS: Broadcast or spray 1/2 - 2 oz. per tree for each inch of trunk diameter. Use lower rates on sandy soils and higher rates on soil with high clay content. Do not exceed 1 lb. per tree.

ORNAMENTAL SHRUBS AND TREES: Drench or spray 2 oz. for small shrubs and up to 2 oz. per inch of trunk diameter for large shrubs and trees. Irrigate into soil.

ORNAMENTAL BEDDING PLANTS, VEGETABLE CROPS AND GROUNDCOVERS: Drench or spray 2 oz. for 100 square feet. Irrigate into soil.

LAWN AND TURF: Broadcast or spray up to 2 oz. per 1,000 square feet. Irrigate immediately after application.
