SPIDER TRAP

SPIDER FACTS Some spiders cause problems for homeowners by running and wandering through homes. They actively hunt for their prey and rely on their searching abilities and speed to find and catch insects. Unfortunately, these habits can be irritating and annoying. Some of these species can also be aggressive and inflict toxic, painful and slow-healing bites. The Spider Trap imitates an effective hiding space for spiders. Placing traps beside baseboards will catch spiders running along edges searching for insects and mates. Long term use of the Spider Trap will reduce troubling infestations without the use of toxic chemicals.

Peel Release Paper

Assemble Trap

Set Traps

Assemble traps by peeling release paper and tucking tab along edge into slot to form a triangle. Set traps where spiders have been seen. Place them along baseboards, near doorways and in dark areas. The side of the traps should always touch a wall for best results. Replace every 3 months, or sooner if full of spiders. In case of contact, glue can be removed with vegetable oil. **CONTAINS NO TOXINS OR PESTICIDES. BAIT IS IN GLUE.**
