

Crazy Raspberry Ant Control

By DoMyOwn staff

What are Crazy Raspberry Ants?

Crazy Raspberry Ants are a new invasive pest species first identified in and around Houston Texas in 2002. Since that time the infestation in Texas has grown encompass 11 counties and are a real problem for homeowners. These ants have not been identified to species but are commonly called crazy Raspberry ants after the exterminator who first noticed them.

How to Identify Crazy Raspberry Ants

- They will show up in extremely large numbers, even millions to billions
- Ants are uniformly sized at about 1/8 inch and reddish-brown in color
- They do not form trails but instead move about rapidly and erratically
- They seem to have an unexplained attraction to electrical equipment such as computers, hair dryers, and air conditioners. In some instances large enough numbers have accumulated to cause short circuits and ultimately equipment failure.

Crazy Raspberry Ant Nests & Colonies

Crazy Raspberry Ant nests are can be found underneath or inside of practically any object or void including soil, concrete, stumps, potted plants, etc. and especially objects containing moisture. Nests usually occur outside with worker ants foraging inside homes and buildings.

Crazy Raspberry Ant Feeding Behavior

Crazy Raspberry Ants are omnivorous and will eat almost anything. Known food sources include small insects and vertebrates, sweet parts of plants, and over-ripe or rotten fruits.
