Bed bug Distribution Map (Bed bug Locations)

Today, bed bugs are known to inhabit 100% of the temperate regions in the world. The spread of the bed bug has become so prevalent due to methods of modern transportation via train, car, plane, and boat. The bed bug has been allowed access to every terminal and port on any continent traveled. It has primarily gained the biggest foothold in some of the most frequently traveled cities, specifically in their hotels. Bed bugs can be found in any location humans visit or inhabit on the planet. This invasive species has spread to all regions of the world.
