

**HOW TO USE HIBISGAIN:** The key to success with heavy-feeding hibiscus plant is to fertilize lightly and often. Hibiscus should be fertilized at least once a month throughout the growing season.

Potted Hibiscus	
6"	1 tablespoon
10"	2 tablespoons
14"	4 tablespoons
24"	8 tablespoons

In-Ground Hibiscus	
2-3'tall	2 tablespoon
4-5'tall	4 tablespoons
6-7'tall	6 tablespoons
10'tall	8.5 tablespoons

HIBISGAIN can be applied directly on top of soil or mulch every **4 weeks**. It should be sprinkled evenly under and slightly beyond the spread of the branches. *It should be kept off of the foliage and away from the trunk.* Be sure to water the area well before and after fertilizing. Do **not** apply HIBISGAIN to dry soil. Take care to brush or wash fertilizer granules off leaves to prevent injury (burn).
