Your [PestXpert Outdoor Home Barrier Kit](#) is an easy and effective way to combat common outdoor pests and prevent re-infestations. One kit provides enough product for 2 treatments. Read below for a step-by-step guide to using your kit.

Your kit includes:

2 bottles of [PestXpert IGR Concentrate](#)

2 bottles of [PestXpert Pyrethrum PBO Plus Concentrate](#)

1 bottle of [PestXpert Foaming Insect Killer](#)

1 bottle of [PestXpert Home Barrier Insect Killer Concentrate](#)

STEP 1 Create Your Mixture

To begin, grab 1 bottle of PestXpert IGR Concentrate, 1 bottle of PestXpert Pyrethrum PBO Concentrate, your bottle of PestXpert Home Barrier Insect Killer Concentrate, and a hand pump sprayer (not included in the kit). Wearing gloves:

- Add half a gallon of water to your hand pump sprayer
- Add 4 ounces of PestXpert Home Barrier Insect Killer Concentrate to the sprayer
- Add 1 fluid ounce of PestXpert Pyrethrum PBO Concentrate (1 bottle) to your sprayer
- Add 1 fluid ounce of PestXpert IGR Concentrate (1 bottle) to your sprayer
- Add the additional water needed to make one gallon of finished solution.
- Add the cap to your sprayer and shake vigorously to combine the water and chemicals

STEP 2 Apply the Spray

Now it's time to treat your home. Be sure to wear long sleeves, closed-toe shoes, and safety goggles while performing your treatment. Walk the perimeter of your home or structure and focus on these areas:

- Apply a spray 3 feet-up and 3 feet-out from the foundation of your structure
- Treat patios and decks, paying close attention to cracks and crevices
- Spray dense shrubs and bushes and beneath trees
- Spray around the garage door and around door and window frames

The product-water mixture will cover 1,000 – 1,500 square feet (depending on target pests and how heavily the mixture is applied). Reapply every 30-60 days as needed.

Be sure to keep children and pets away from areas being treated until the spray has dried (typically 1-2 hours). Do not spray when pollinators are active and/or when winds will carry the spray toward pollinators.

STEP 3 Apply PestXpert Foaming Insect Killer

PestXpert Foaming Insect Killer comes in an aerosol can, so it does not need to be mixed with water. Wearing gloves and protective goggles, apply PestXpert Foaming Insect Killer in the following places:

- Into cracks and crevices around the structure and foundation of the building
- Around eaves and soffits
- Around doors and windows
- Along gutters
- In weeping holes
- In the vertical seams in vinyl siding

Be sure not to get any product into gutters that drain into sewers or storm drains, lakes, or other bodies of water, as the product is toxic to aquatic life.

If you have any questions on how to use any of the products in your kit, give us a call at 866-581-7378 or email us at support@domyown.com.
